

ISOfix has been adopted by OE manufacturers worldwide and Rescroft can now offer this proven car safety system to the multi-passenger vehicle market.

The main benefit of ISOfix is that the system, via its locking bar, creates a rigid link between the child seat and the vehicle. It eliminates the risk of slack installation, which is one of the key areas of misuse with child seats that rely on the use of adult seat belts.

Features

- Standardised fixing for simple installation and removal - one quick movement releases the child seat leaving the vehicle seat ready for normal use.
- Removes the risk of slack installation with conventional adult seat belts.
- Available as an option for Defender III and Nevis seat ranges.
- Can be used in conjunction with the Britax Duo ISOfix child seat.
- MIRA tested to static regulation ISO 13216-1 and dynamically tested to permissible conditions of ECE R44-03 Specific Vehicle Approval.
- Ideal for ambulances, community vehicles, mini-buses, etc.

Note

1 Product improvement may affect specifications.
